

Checkout Overview

Last Modified on 06/28/2022 3:40 pm PDT

Our **Checkout** product allows adding payments to your website or application using a hosted payment page or modal window.

There are two ways you can invoke Checkout, the dynamic link method or the [permanent link method](#). Below is a comparison of the two methods.

Dynamic Link Method	Permanent Link Method
Each time Checkout is invoked, a dynamic link is generated and requires web development.	The permanent link is generated within Merchant Manager and does not require web development. A portion of the link can be customized.
The dynamic link is generated using Checkout API.	The permanent link is copied from Merchant Manager and pasted into your website or application.
Each payment transaction is processed via a unique link.	Each payment is processed via the same link.
The transaction amount can be set before the transaction or specified (partial payment) by the customer at the transaction time.	The customer can specify the transaction amount at the time of the transaction, or a single amount can be used for all your customers.
Partial payments are supported.	Partial payments are not supported.
Prefill the checkout page with your customer's saved payment information for repeat transactions and add customer records to the Customer Vault.	No integration with Customer Vault.
Webhooks can be used to automate your processes and workflow.	Webhooks are not available.
CAPTCHA options are "None," "Present if Suspicious," and "Present Always."	CAPTCHA options are "Present if Suspicious" and "Present Always."

Refer to our Developer Portal to view the dynamic link method's instructions.

Checkout supports both [Sale and Authorization](#) transaction types. Visa, MasterCard, Discover, American Express, International Diners, JCB, Google Pay, and [ACH Payments](#) are supported. ACH Payment transaction method must be presented to your customer in USD. If you create a profile in a currency that is not USD, the option for ACH Payments will not display to your customer.

You can elect to automatically send your customer a [receipt](#).

Checkout can be [customized](#) to match your branding. You can create more than one checkout profile to match different payment workflows or brands.

[Surcharges](#) or [Convenience Fees](#) can be added to Checkout to recover your card processing fees or as an additional fee for paying an invoice online.
