Embedded Fields Configuration

To access your **Embedded Fields** settings, go to **Administration**, click *Settings*, then click the *Embedded* tab.

Field	Description
Google V3 Recaptcha	We recommend enabling Google V3 Recaptcha when your checkout page is accessed directly on your website and does not appear behind a login. If you already display another captcha service to prevent carding attacks, configure this option to be off.
Google V3 Recaptcha Threshold Score	reCAPTCHA v3 returns a score (1.0 is likely a good interaction, 0.0 is likely a bot). Transactions below this score will be marked as suspicious.
Google V3 Recaptcha Interval (min)	The length of time you would like your Google V3 Recaptcha number of suspicious requests allowed before resetting the counter.
Google V3 Recaptcha Number of Suspicious requests allowed	The number of transactions scoring below the Google V3 Recaptcha threshold score that you would like to allow.
Verify on Tokenize	Set the toggle to *Yes* if you would like to verify your customer's card before creating the token
Maximum number of declines	After receiving this number of declines from the same customer, your customer will be instructed to start over. This is useful for preventing carding attacks.
